

ASSET TRACKER offers cost-effective, remote monitoring of fixed groups and/or individual animal movements

An autonomous group monitoring and individual asset tracking system that keeps your managers informed of expected and unexpected cattle movements with mobile access and daily alerts.

15-25 FT. RANGE WITH UHF TAGS

Allows true speed-of-commerce monitoring of individual animal assets and total inventory. No special handling means no added stress or elevated risk of weight loss, injury or bruising; maintaining animal value and animal well-being.

AUTONOMOUS MONITORING

Requires no technology expertise, training or additional employee workload. This hands-free asset monitoring system collects EID data regardless of weather, workforce or other operational limitations; improving worker safety and overall productivity.

SECURE, FLEXIBLE DATA ACCESS

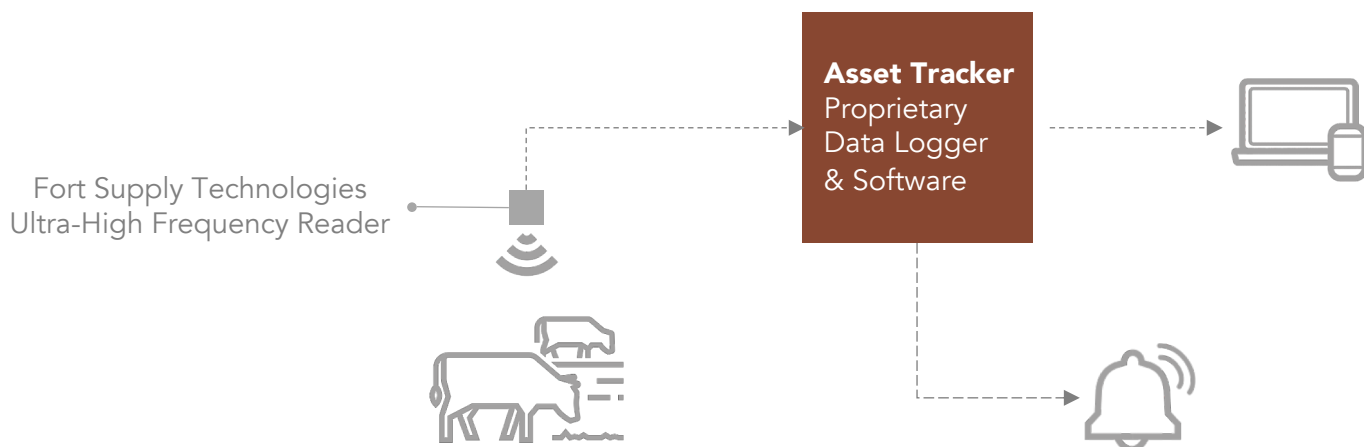

Data can often be immediately received by internal systems preprogrammed for EIDs (aka RFIDs). EID reads are also relayed to the FST cloud to allow 24/7 online access to inventory reports and daily automated alerts can be setup to inform you when animals are missing.

PLUG & PLAY

This patent-pending technology is simplified into a solution requiring less than a day to install. Worktime previously dedicated to visual reading or hand-scanning IDs can be reassigned to other tasks; greatly reducing human-error and improving operational efficiency.

ASSET TRACKER: Asset Monitoring and Alert Solution

Discover a New Level of Productivity

Asset Tracker uses the same ultra-high frequency (UHF) technology as world-class marathons to autonomously track individual animal locations and movements to maintain accurate inventories across your entire operation.

“ Fort Supply’s Asset Tracker has reduced our dependency on labor, while improving our recordkeeping and awareness of which animal assets are where. ”

- Jim Akers, COO, Blue Grass Stockyards
