

**DUAL TRACKER** is the beef industry's only dual frequency EID reading solution

This patent pending dual frequency reading technology is a timely solution for a beef supply chain challenged with accommodating both low frequency (LF) and ultra-high frequency (UHF) EID tags.

### READS BOTH LF & UHF

Allows stockyards, feedlots and packers to receive and manage cattle with either type of EID tag, leaving the producer free to select the EID technology that works best for them. No need to force a single industry standard.

### PLUG & PLAY

This complex, patent-pending technology is simplified into a solution requiring less than a day to install with an existing LF reader. Immediate results include enhancing animal well-being, improving worker efficiency and safety, mitigating human error in the data, and improving processing time to true speed-of-commerce.

### HASSLE-FREE DATA COLLECTION

All cattle can be processed through a single workflow with no need to sort and separate by EID type. All EID tag numbers are consolidated and streamed through a single output to that operation's data management system(s); eliminating human-error and improving workflow productivity.

### SECURE, FLEXIBLE DATA FLOW

Each animal's unique EID tag number is read and streamed to the customer's designated data system(s). Permission based data sharing supply chain partners and Blockchain ledgers can also be setup through our secure, cloud-based platform.

# DUAL TRACKER: Dual Frequency EID Reading Solution

## Discover a New Level of Productivity

Dual Tracker is a practical and precision solution which addresses the LF/UHF challenge where it is occurring in the beef supply chain; at the points of consolidation. Dual Tracker is a cost-effective solution, and it is available now. Dual Tracker allows stockyards, feed yards and packers impacted by this merging of technologies to remain LF/UHF agnostic and continue sourcing cattle from the entire market.

“ Fort Supply’s Dual Tracker is a gamechanger for the beef industry. It’s a practical and simple solution to a complicated and expensive problem. It combines two EID technologies previously thought to be incompatible. ”

- Malcolm Harvey, President, Fort Supply Technologies
