

VALUE TRACKER offers EID tags, readers, devices, and software guaranteed to work together

Producing value-added calves presents challenges, but Value Tracker simplifies collecting and managing their value-added data.

BOTH LONG & SHORT RANGE

The longer range of UHF allows animals to be identified without confining or restraining them. No special handling means no added stress or elevated risk of injury or bruising; maintaining animal well-being. But UHF equipment can also be adjusted to a short-read range for identifying an individual animal. One size fits all.

SECURE, FLEXIBLE DATA ACCESS

All that value-added data and herd/group information is securely stored in the FST cloud and accessible by authorized users on any smartphone, tablet or computer with internet access. Your data, when you need it, how you need it.

ALL THE PIECES WORK TOGETHER

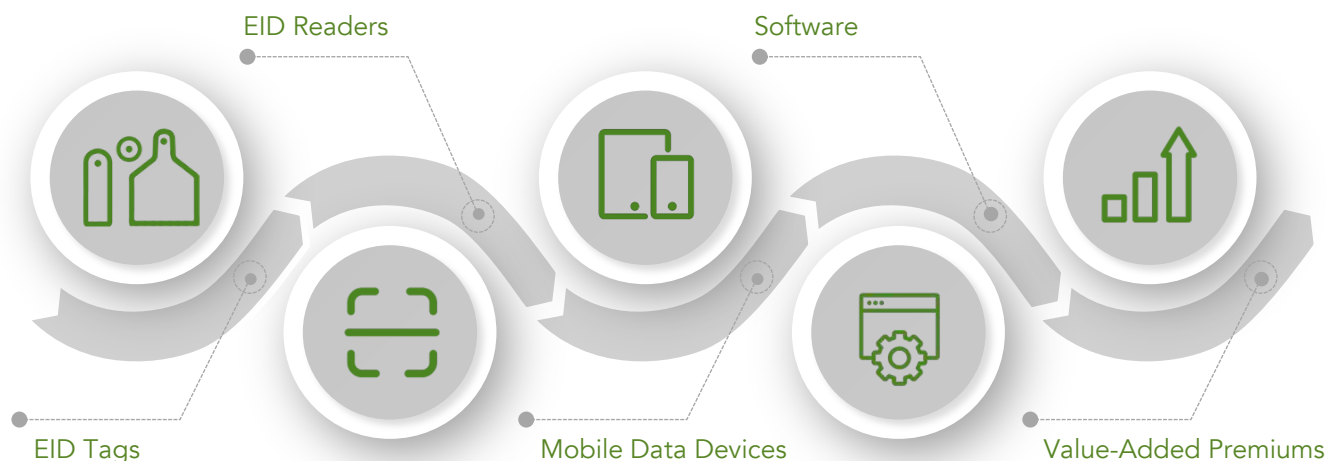

Our electronic ID tags, readers, mobile devices and software have all been pre-qualified and are guaranteed to work seamlessly together. Workers spend their time on animal care instead of "tech support"; improves job satisfaction and work productivity.

AUTOMATED/HANDS-FREE

Replacing visual monitoring and hand data entry with automated data collection improves the speed and productivity of any operation and costly human errors are avoided. Stationary, hands-free EID equipment takes productivity to an even higher level.

VALUE TRACKER: Integrated Value Tracking Solution

Discover a New Level of Productivity

Piecing together the right electronic ID tags, EID readers, mobile data devices and software can be a frustrating chore, but Value Tracker's all-inclusive solution guarantee lets producers focus "chore time" on raising high-quality, value-added beef.

The screenshot shows the Value Tracker web application. The top navigation bar includes links for Fast Hand, Animals, Offspring, Comment, Actions, Admin, Sync (online), and Logout. The main form has tabs for Automatic, Manual, All Scan, and Single Scan. The form fields include Visual (90806-16), Backtag (ID), EID (ID), Pasture or Pen, Color, Purchase Weight (Purchase Weight), Weight (Weight), Purchase Price (Purchase, Type), and Comment (Comment). A Save button and a Clear button are at the bottom. On the right, a Daily Summary panel shows: Daily Summary: 2, Previous Animal Information, Visual: 90806-16, EID: 988009121335504, Last Weight: 546, Sex: heifer, Color: black, Status: alive, Head Days: 123, Total Event Income, Current Pen/Pasture: Point Trap #2, ADG (total): 0.69, ADG (last 2): 0.69, Origin: Flatonia Livestock Commission Co., Inc., Breed, and Gender: female.

“ We’ve used Value Tracker for several years to tag our cattle and collect value-added data to sell them for premium. The Fort Supply tags, equipment and software work seamlessly together, and their custom approach is top notch. ”
